SPECIFICATIONS

Type	2 speed direct drive full-automatic with auto repeat
Platter	Aluminium alloy die-cast 310 mm, outer diameter: 1.4 kg.
Motor	Quartz locked PLL DC servo type
Speed	33-1/3 and 45 rpm.
Pitch control range	±4.5%
Rumble	70 dB (DIN B)
Wow & Flutter	Less than 0.04% (WRMS)
Tone Arm	Static balance tubular type
Head shell	Plug-in type
Effective length	220 mm
Overhang	15 mm
Adjustable force range	0 to 4g/1 turn of the dial
Cartridge	
Frequency response	20 – 20,000 Hz
Output voltage	2.5mV at 1 kHz 50 mm/sec
Channel separation	23 dB at 1 kHz
Channel difference	1.5 dB at 1 kHz
Tracking force	2 ±0.5g
Stylus tip	0.6 mil. diamond stylus
Power source	240V 50 Hz AC
Power consumption	9.5 watts
Dimensions	430(W) x 135(H) x 390(D) mm
Net weight	7.5 kg
Accessories	45 rpm adaptor

Specifications are subject to change without notice.

DISASSEMBLY INSTRUCTIONS

1. Bottom Board Removal

- (1) Remove the dust cover, turntable and sheet then lock the tone arm and turn over the set.
- (2) Remove four screws and washers on the bottom board and lift up the bottom board.

2. Motor Removal

- (1) Disconnect the plug for motor-wiring.
- (2) Remove three screws (A) on the motor and remove it from the bottom side.

3. Chassis Removal

- (1) Remove five slide knobs and a repeat knob from the top of the set.
- (2) Remove the bottom board.
- (3) From the bottom side, remove two cord clampers removing four screws (B) and then unsolder the lead wires connecting the tone arm and the phono P.C. board.
- (4) Remove seven screws (C) fixing the chassis, five screws (D) fixing the front panel and remove a screw (E) fixing the phono P.C. board bracket.
- (5) Retighten two screws on the pickup plate and remove it.
- (6) The chassis with some parts can be removed.

ADJUSTMENT

1. Height of Arm Lifter

Turn the adjusting screw (F) clockwise or counter-clockwise and adjust the distance between the stylus tip and face of a record disc on the turntable to be 6 mm.

2. Auto-return Position

- (1) Remove the rubber cap (G) on the panel and hold the tone arm on the arm rest, and you can see an adjusting screw through the hole.
- (2) Turn the screw clockwise to make the stylus lift up faster, and turn the screw counter-clockwise to make it lift up later.

3. Auto-in Position

- (1) Remove the rubber cap (G) on the panel and move the tone arm to the center shaft until you see another adjusting screw through the hole.
- (2) Adjust the screw so that the stylus should be set down within 145 mm to 147 mm radius from center shaft. Turn the screw clockwise to set down closer to the center shaft, and turn counter-clockwise to set down closer to the edge of turntable.

4. Overhang

- (1) The overhang of this tone arm should be 15 mm.
- (2) Adjust it by moving the cartridge back and forth, loosening the cartridge mounting screws. After adjustment, the screws should be tightened.

5. Speed Controller

Never try to adjust the semi-fixed resistors on the Motor P.C.Board, as this Quartz Locked PLL motor is precision assembled and adjusted at the factory.

REPLACEMENT

1. Cartridge

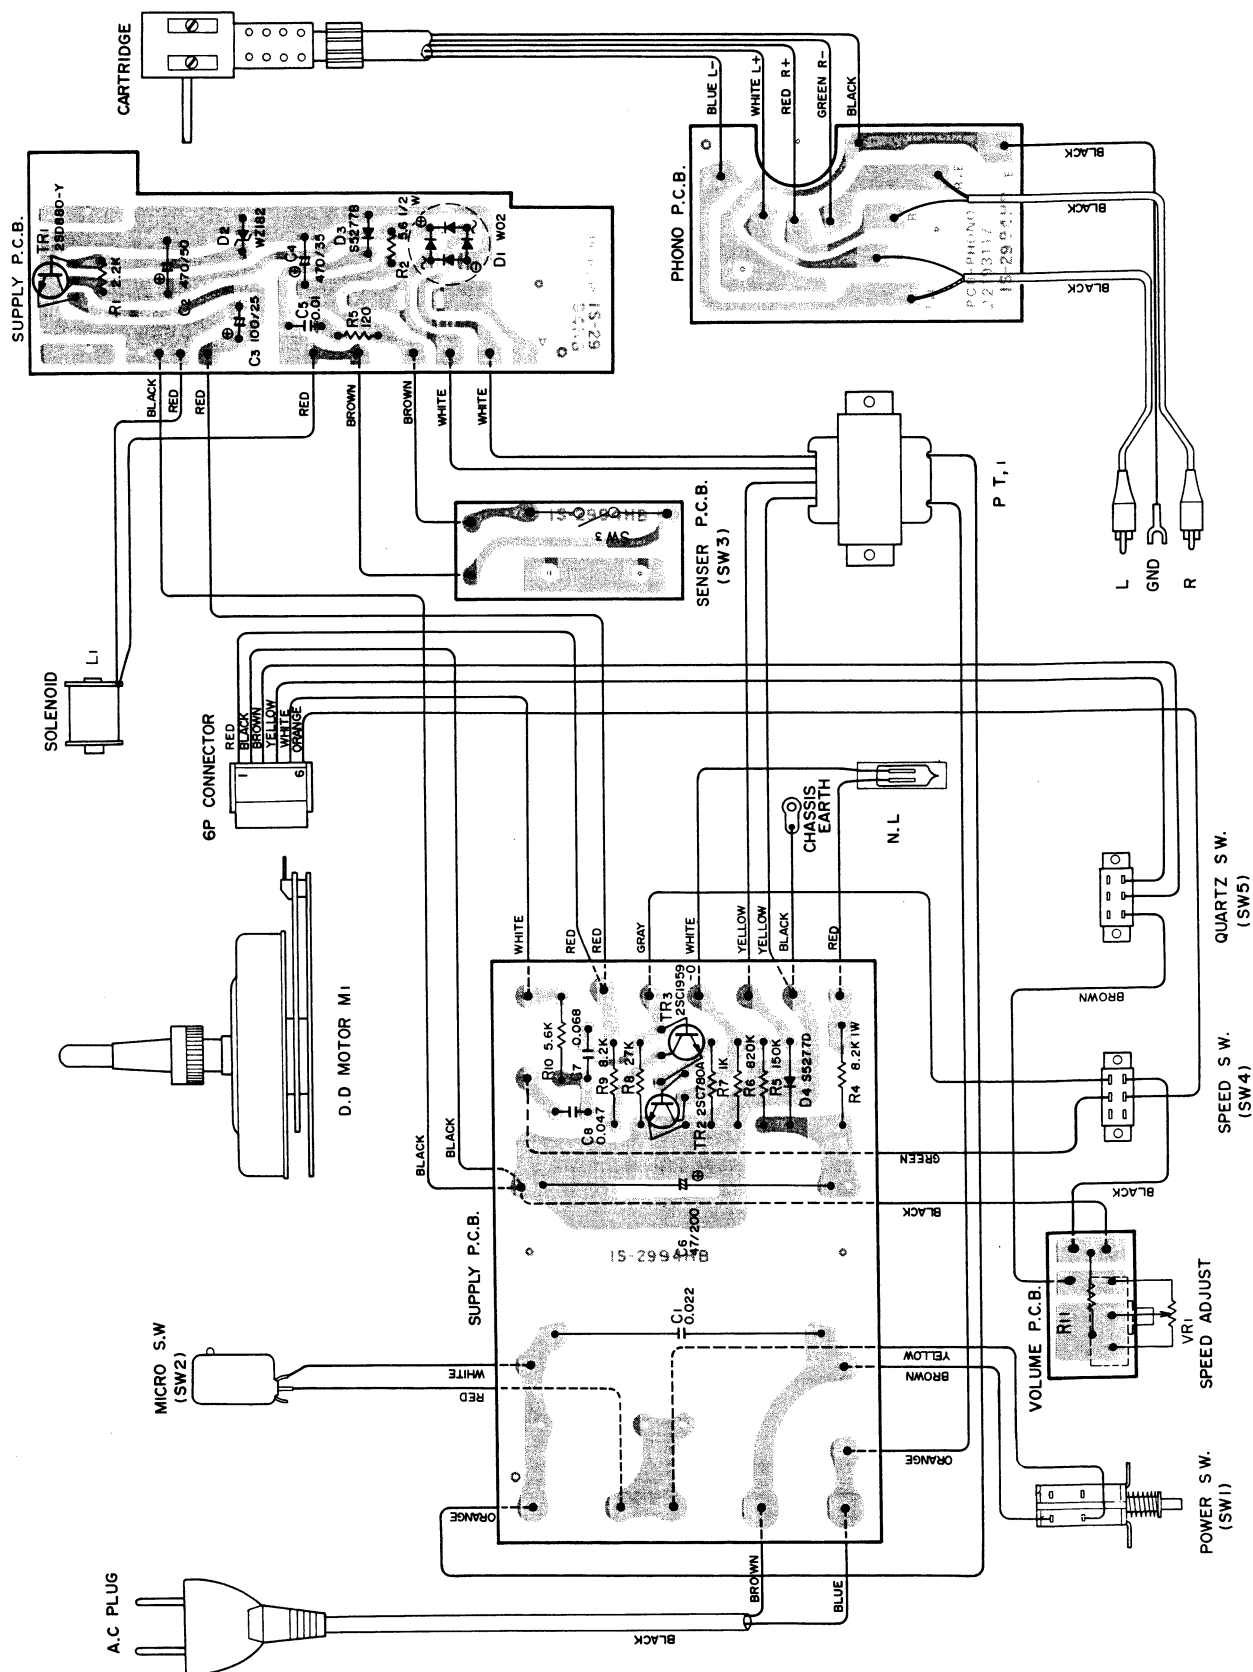

- (1) Replace the cartridge in the head shell so that the axis of the cartridge should be lined up with the axis of the head shell.
- (2) Connect the coloured wires in the head shell to the suitable terminals of the replaced cartridge.

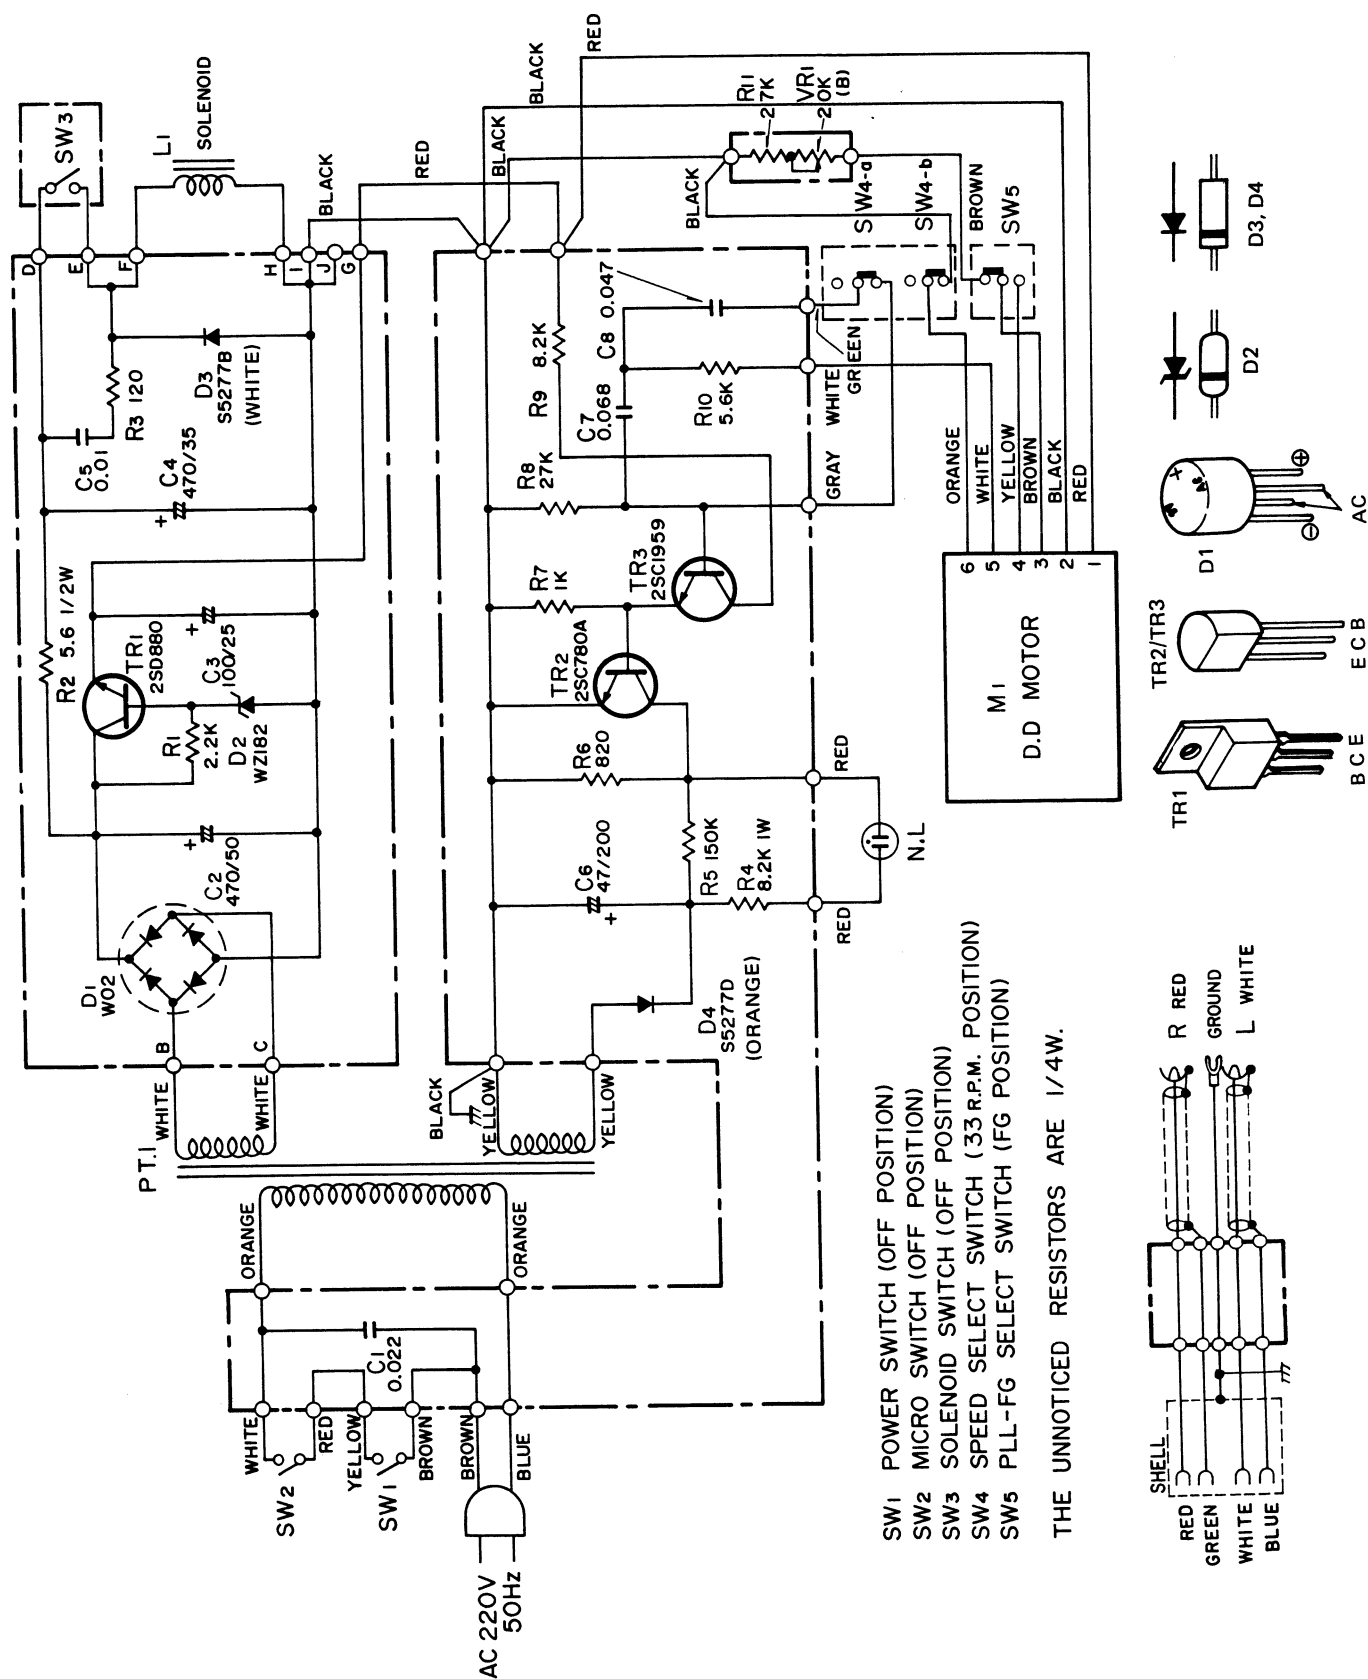

TROUBLE-SHOOTING GUIDE

Trouble	Cause	Remedy
Motor		
Motor does not rotate.	<ol style="list-style-type: none"> 1. No power to motor. 2. Damage of motor. 	<ol style="list-style-type: none"> 1. Check leads of power circuit motor and switch. 2. Replace motor.
CAUTION: The motor assembly is precisely assembled and adjusted at the factory. An entire motor should be replaced to a difective motor assembly.		
Tone Arm		
Stylus causes jumping or improper tracking.	<ol style="list-style-type: none"> 1. Stylus pressure too light. 2. Stylus worn out or damaged. 3. External vibration. 4. Cartridge case touches the surface of record. 	<ol style="list-style-type: none"> 1. Adjust for specified pressure. 2. Replace stylus 3. Install the player where there is no vibration. 4. Excessive stylus pressure. Adjust for specified value.
Sound		
No sound, or only from one channel.	<ol style="list-style-type: none"> 1. Cartridge circuit open. 2. Improper connection of headshell and tone arm. 3. Open lead between headshell and output cord or mis-wiring. 	<ol style="list-style-type: none"> 1. Replace cartridge. Replace leads. 2. Correct the connection. Check that the connection is free from oil, dust etc. and clean. 3. Replace the lead (if the tonearm lead is open, replace the pick-up assembly) or correct wiring.
Distorted sound.	<ol style="list-style-type: none"> 1. Stylus worn out or damaged. 2. Cantilever bent. 3. Stylus pressure to light or heavy. 	<ol style="list-style-type: none"> 1. Replace stylus. 2. Replace stylus. 3. Adjust for specified pressure.
Rumble or wow.	<ol style="list-style-type: none"> 1. Motor damaged. 	<ol style="list-style-type: none"> 1. Replace the motor assembly.
Hum.	<ol style="list-style-type: none"> 1. Cartridge is affected by electromagnetic field. 2. Not grounded. 	<ol style="list-style-type: none"> 1. Keep equipment such as motors or transformers away from the player. 2. Connect ground lead to ground terminal of the amplifier.
Howling.	<ol style="list-style-type: none"> 1. Cartridge picks up vibration or sound pressure from speaker. 	<ol style="list-style-type: none"> 1. Install the player on a rigid table or in location where howling is minimized.
Auto Return/Auto-In		
No Return	<ol style="list-style-type: none"> 1. Defect of proximity switch. 2. Defect of solenoid. 3. Deformation of clutch. 4. Poor alignment of auto-return. 5. Deformation of roter spring (and no auto-in,too) 6. Loose connection of pickup plate 	<ol style="list-style-type: none"> 1. Replace. 2. Replace 3. Replace. 4. Align. 5. Replace. 6. Tighten the set screws on the pickup plate.
Unsuitable auto-in or auto-returning position.	<ol style="list-style-type: none"> 1. Poor alignment of adjusting screws. 	<ol style="list-style-type: none"> 1. Align. See adjustment section.
Auto-Repeat		
Abnormal auto repeat action.	<ol style="list-style-type: none"> 1. Deformation of pull springs on the start levers. 	<ol style="list-style-type: none"> 1. Replace.
Abnormal repeat times.	<ol style="list-style-type: none"> 1. Deformation of pull spring on the clutch lever. 	<ol style="list-style-type: none"> 1. Replace.
